I. Why LNG?

Natural Gas Demand Drivers

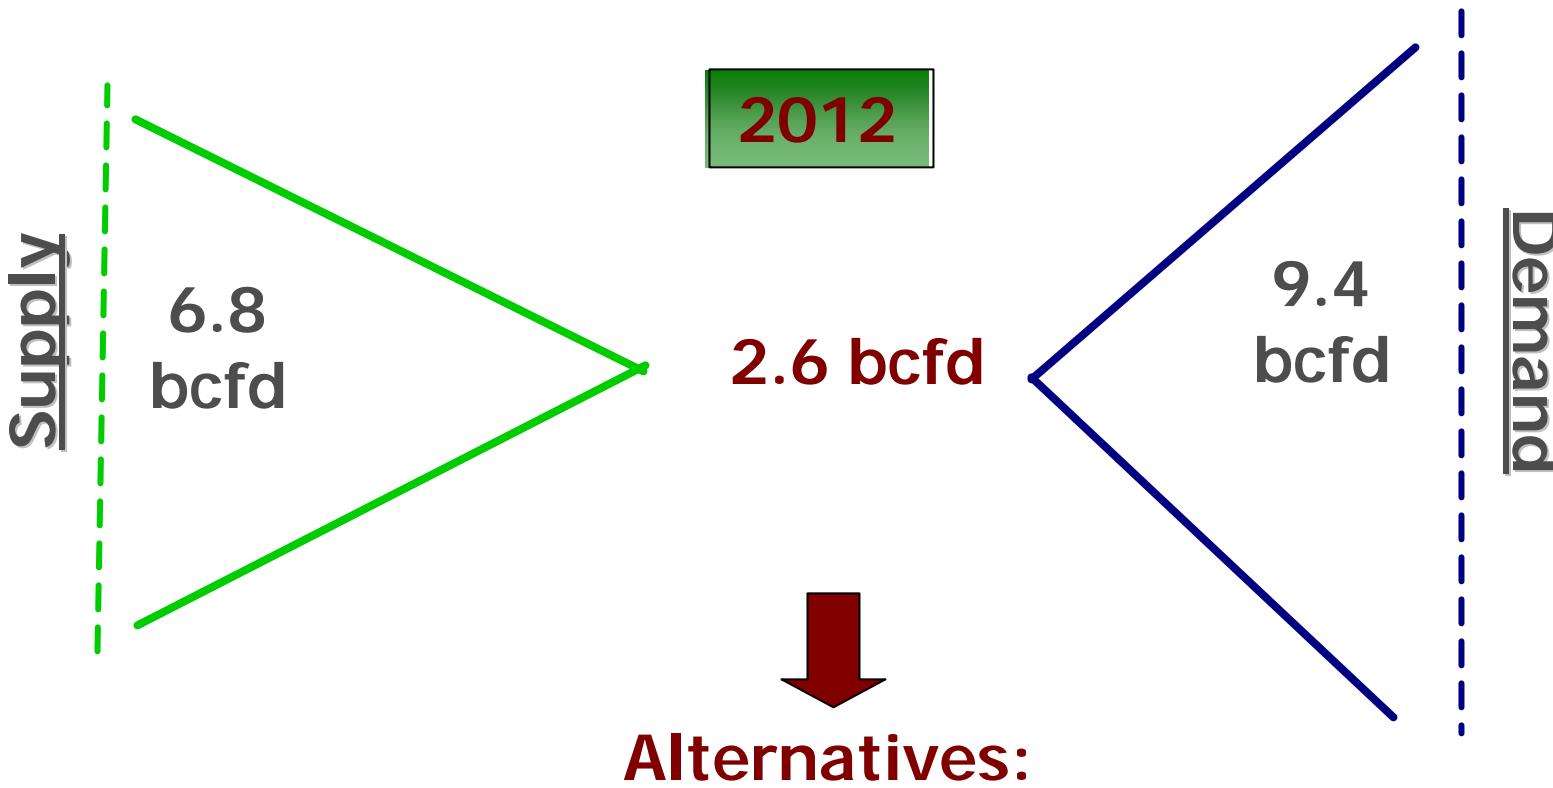

Natural Gas
Demand by
Sector

Source: Energy Prospective, Ministry of Energy, 2002

...Natural Gas Demand Drivers

Demand for natural gas will exceed national production

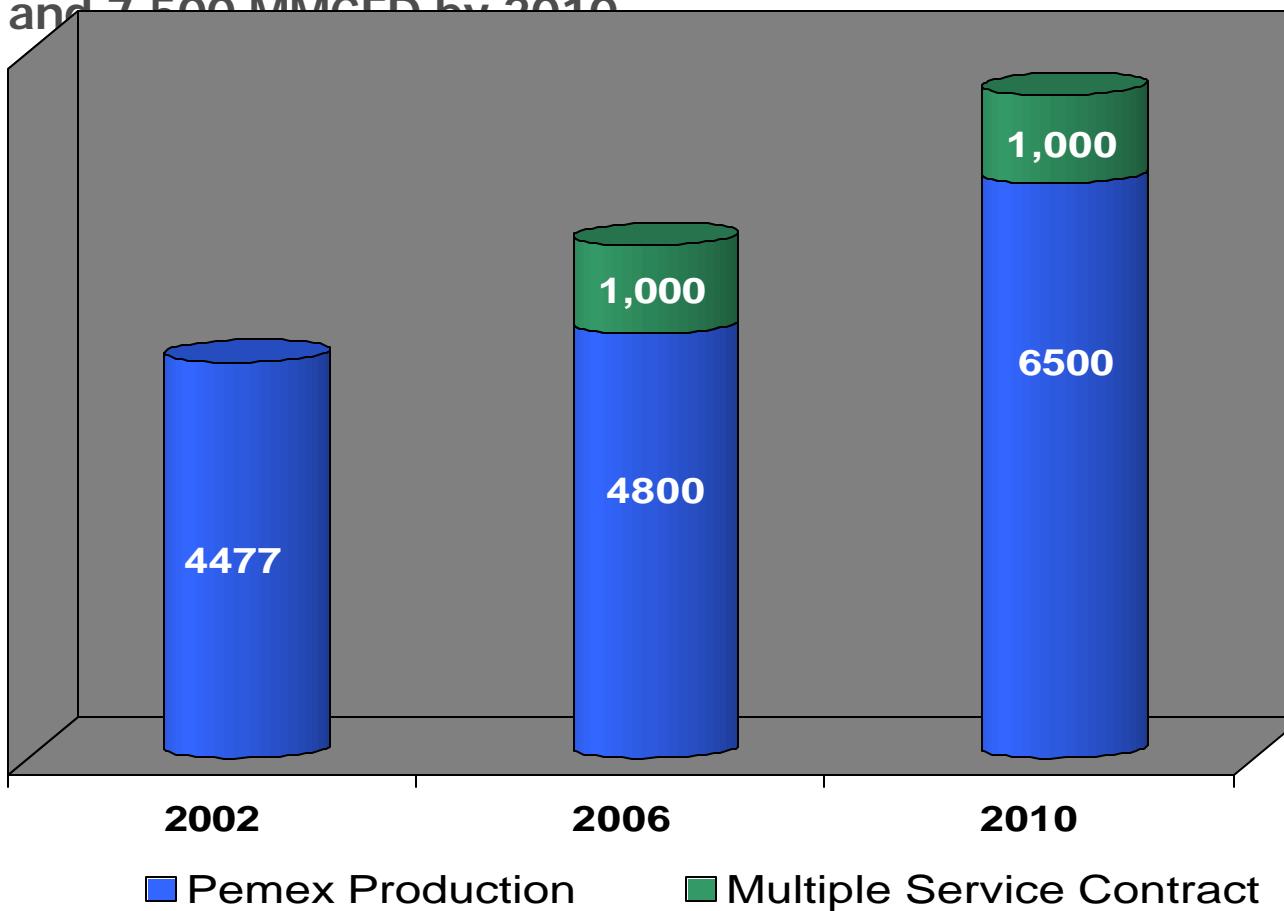

Source: Energy Prospective, Ministry of Energy, 2003-2012

1) Efforts to increase natural gas production in Mexico

Mexico is currently producing 4.5 BCFD

- With Multiple Service Contracts & Strategic Gas Program, Pemex estimates that production will increase to 5,800 MMCFD by 2006 and 7,500 MMCFD by 2010

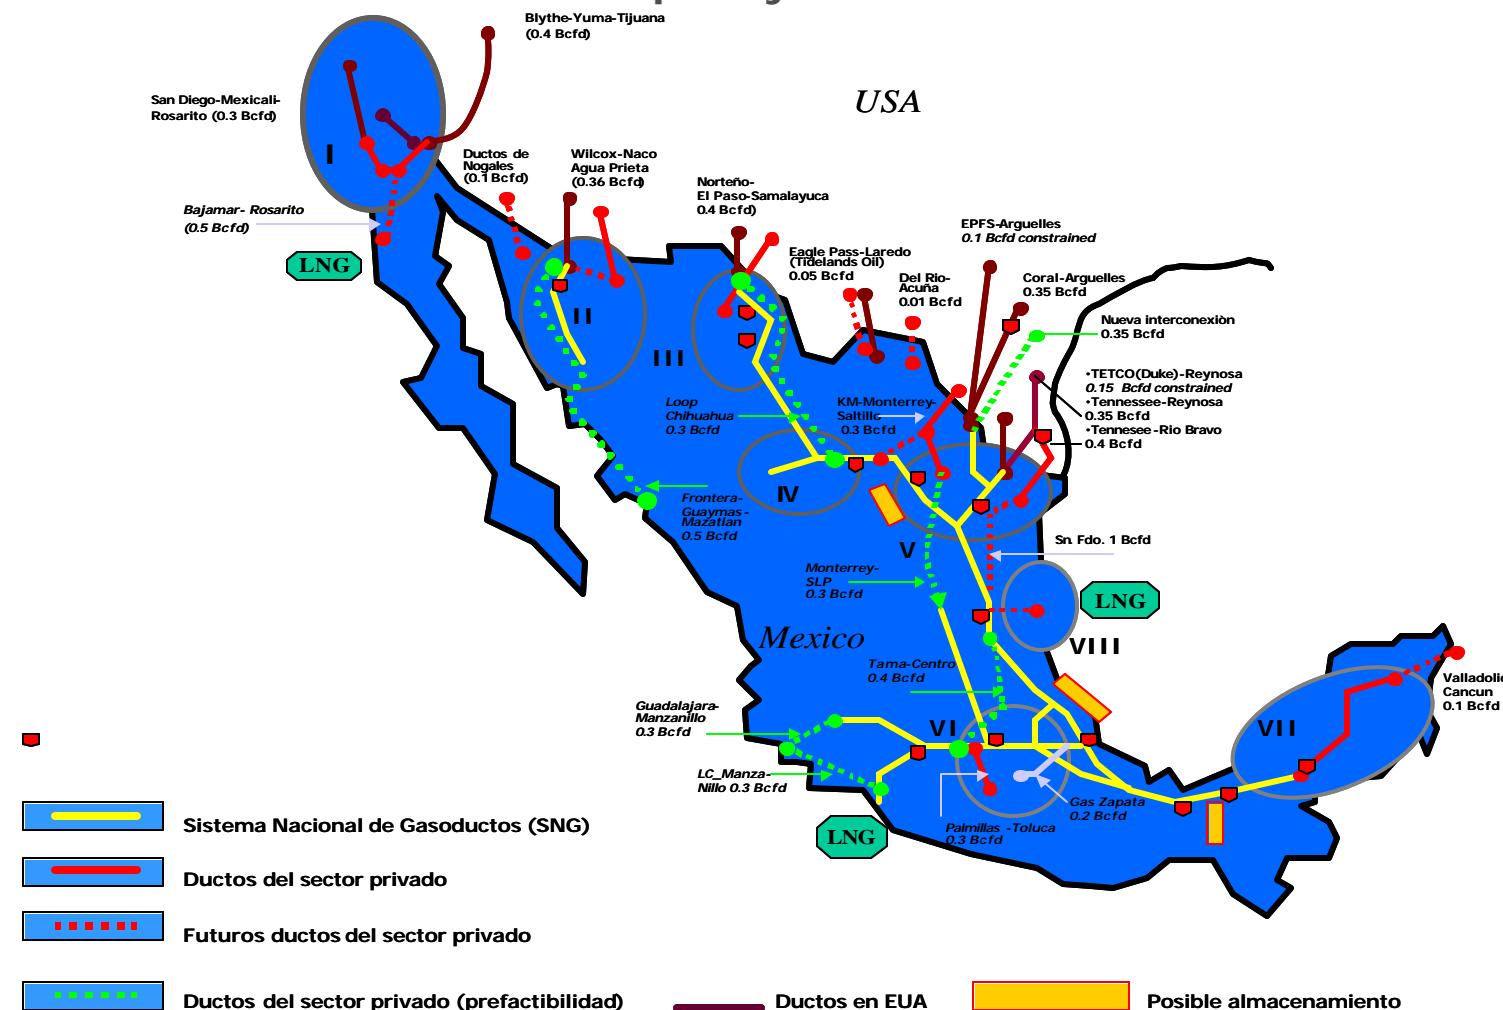

*Source: PEMEX Gas, Business Plan, 2002

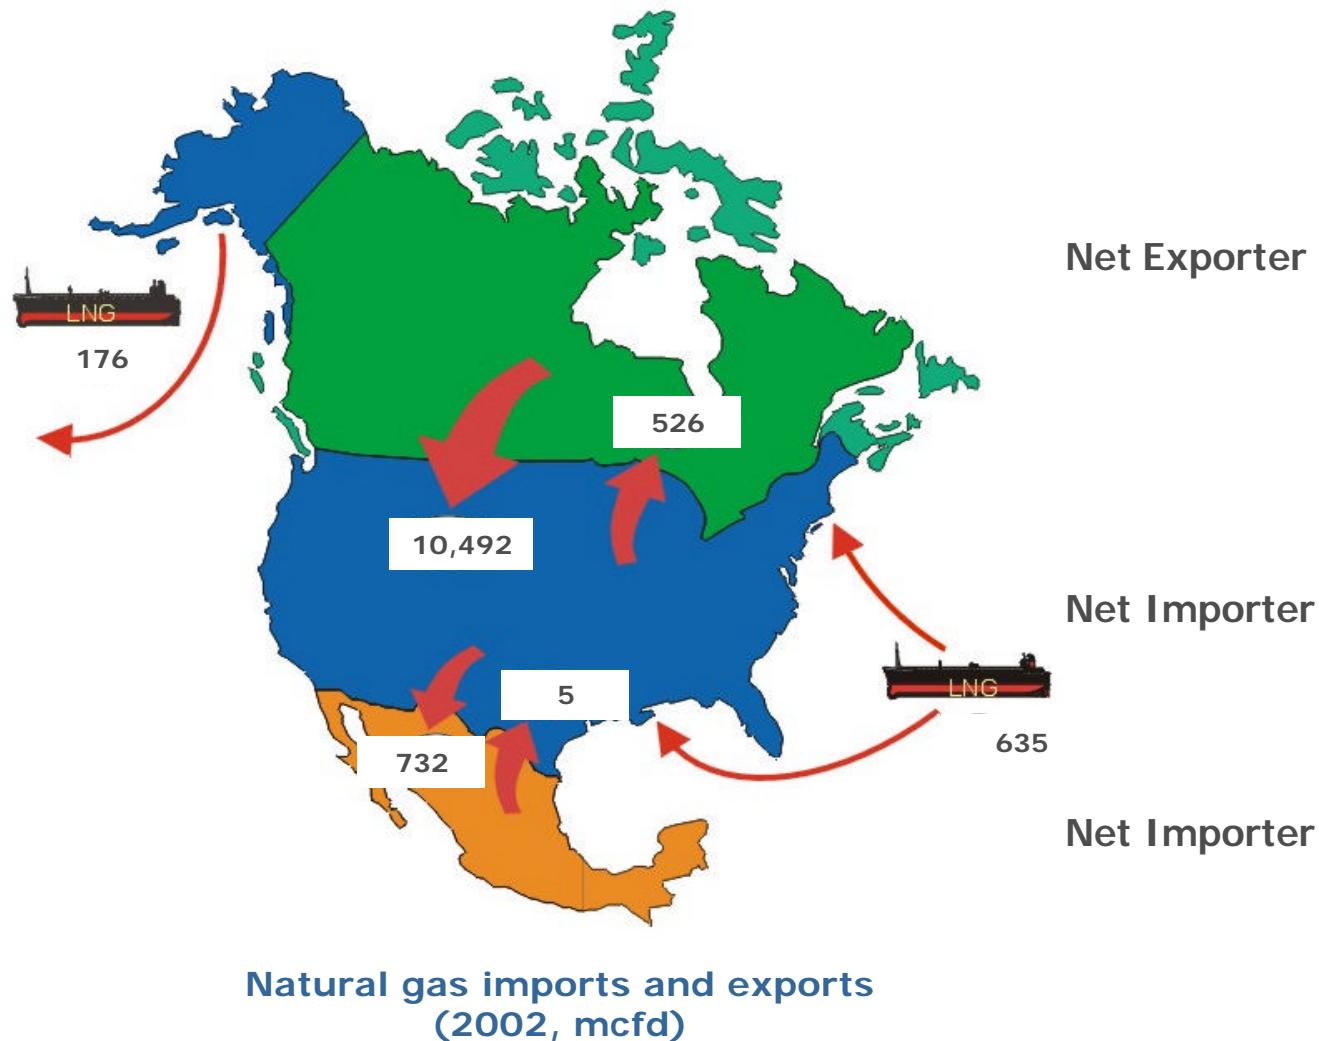

2) Pipeline Interconnection Infrastructure

- Interconnections between Mexico and the U.S. amount to 3.3 bcf/d of cross-border firm capacity.

II. LNG Projects in Mexico

Index

Where we Stand

LNG Projects in Mexico

- ① Spring 2001 – Prices reached 9.84 USD/MMbtu and companies expressed their interest to build LNG Terminals in Mexico
- ② Autumn 2001 – CRE developed the regulatory framework for LNG Terminals in Mexico
- ③ August 2002:
 - CRE published NOM-EM-001-SECRE-2002
 - CRE issued a guide for permit applications
 - Marathon Permit Application
- ④ Sep, Oct & Nov 2002 – CRE received 4 more application permits (Sempra, Shell - Baja & Altamira-, Chevron - Texaco Onshore)
- ⑤ By December 2002 CRE is evaluating 5 proposals
- ⑥ April 2003 -Marathon was granted the first LNG storage permit in Mexico
- ⑦ July 31, 2003 – CRE granted 2 LNG storage permits to Shell, one for Baja California and the other for Altamira
- ⑧ August 7, 2003 – CRE granted a LNG storage permit to Sempra Energy

LNG in Mexico

- **Two types of projects**
 - Bid driven (i.e. Altamira)
 - Market driven (i.e. Baja California)
- **Regulatory Objectives:**
 - Safety
 - Open Access
 - Cost-Based Tariffs
- **Several authorizations required**

LNG Storage Permits Granted

LNG Storage Permits in Mexico

Over the last 6 months, the CRE granted 4 permits to build and operate LNG receiving facilities in Mexico

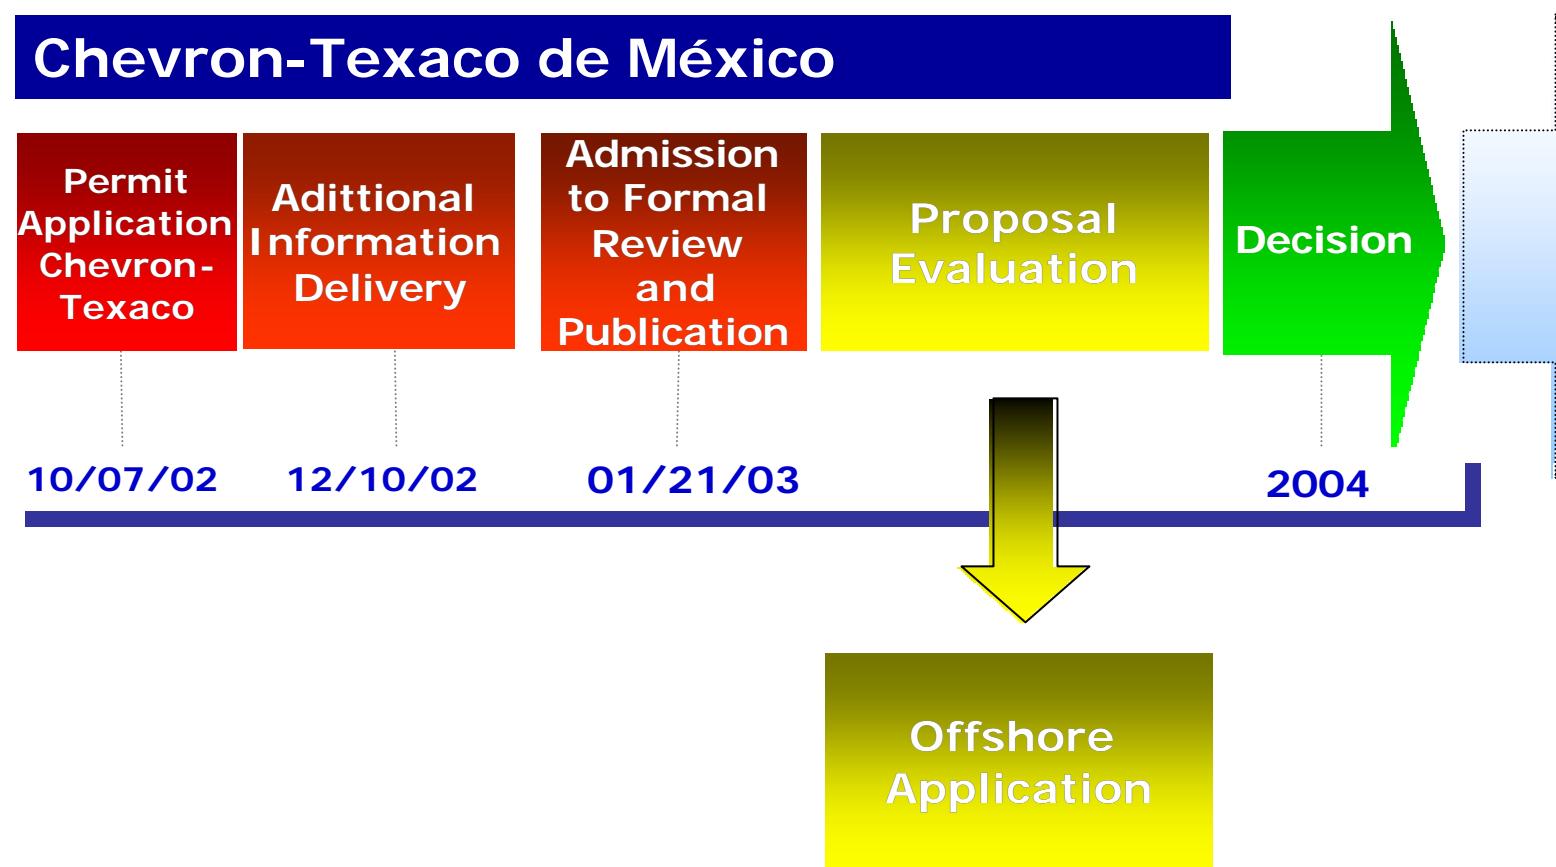

- ↗ Three are located in Baja California and one in the Gulf of Mexico
- ↗ Potential total firm regasification capacity could be 3.6 bcf/d and peak regasification capacity of 4.3 bcf/d
- ↗ Projects could begin operations in 2006 and 2007
- ↗ Open Access requirement on non-contracted capacity
- ↗ Storage and regasification tariffs based on cost of providing service
- ↗ Projects will diversify sources of gas and help stabilize prices
- ↗ Full containment tanks
- ↗ Investment commitments, up to 2.4 Billion USD

Index

Next Steps

Offshore LNG Application

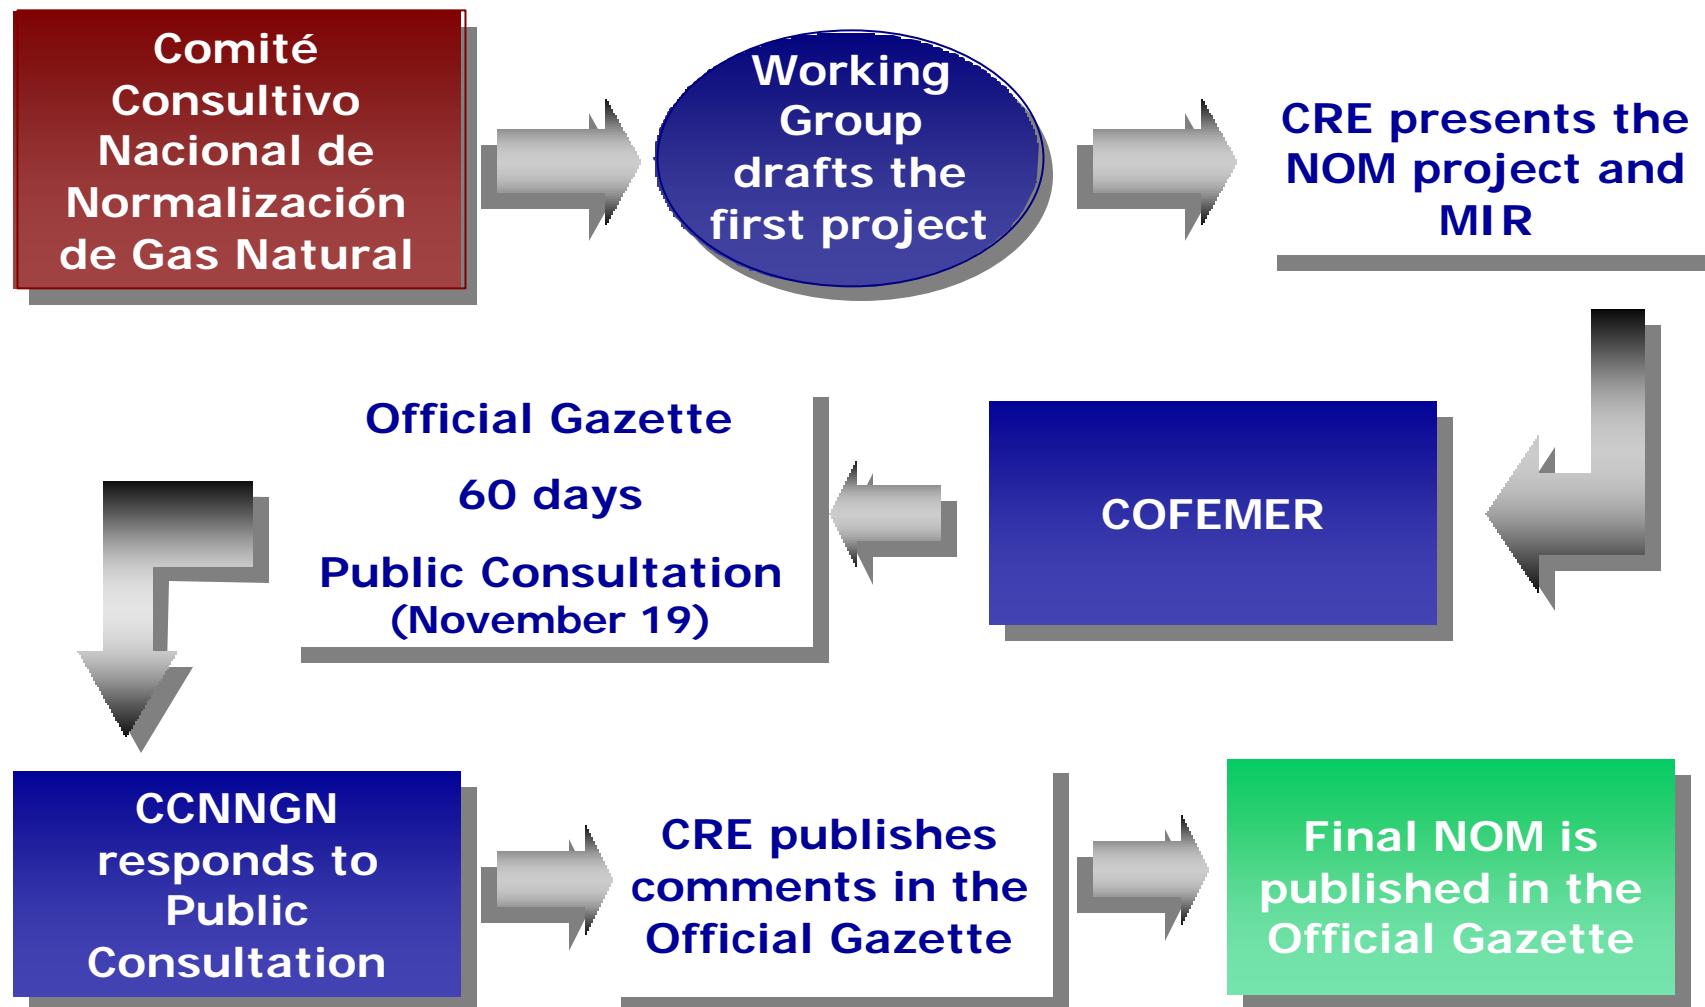

- On July 29, 2003 ChevronTexaco submitted a modification regarding the site for the LNG storage facility to place it in the Pacific Ocean, nearby the Coronado Islands

Other Possible LNG Storage Terminals

NOM-013-SECRE-2003 for LNG Plants

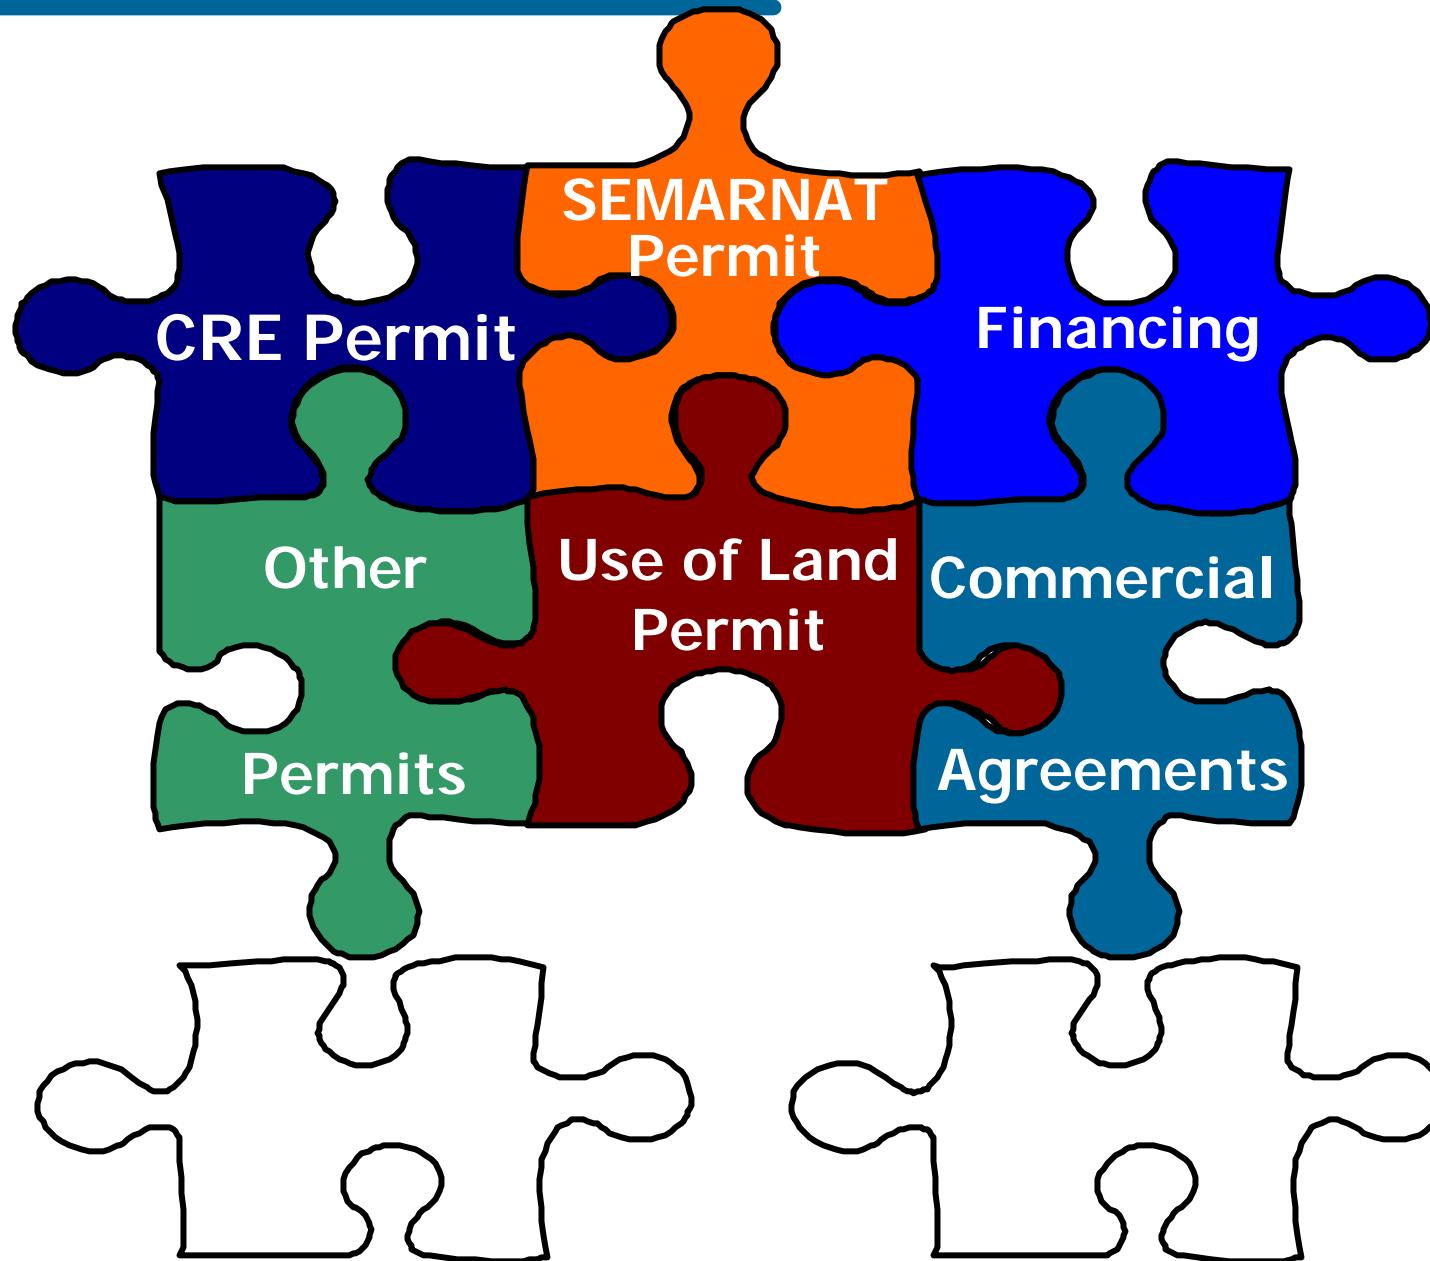

Regulation for Storage Permits

Applicants must include among others:

- **Technical description of the project**
- **Technical, administrative and financial capability of project**
- **Description of safety methods and procedures for the operation and maintenance of the system**
- **Non-discriminatory General Terms of Service**
- **Information on Potential Supply sources**
- **Justification of potential demand**
- **Compliance with NOM**

Regulated Activities

Index

III. Lessons Learned

Lessons Learned

- Mexico has to increase its natural gas supply
 - LNG storage projects will diversify the sources of natural gas and help stabilize prices
 - The regulatory framework has to adapt permanently to provide stability and certainty to investors
 - No project is alike
 - Educate, Educate, Educate
